

1 observer lock

$$T(U) = U$$

local readouts
return the world

2 pixel lock

$$P = \varphi + \alpha \sqrt{\pi}$$

geometry and field
read one cell

3 horizon lock

$$N = MAR \max$$

record supply equals
screen cost

4 24-tick lock

$$v/E = (N/\pi)^{-P/2}$$

hierarchy becomes
a repair rhythm

5 gravity lock

$$G\ell^2 = 1$$

area and entropy
share the pixel

6 outputs

$$34$$

same branch
same source
