

source-selected 12-port carrier architecture

presentation-invariant, architecture-sensitive

federation of self-reading supports

records, feedback, checkpoints, accepted repair

one public normal form

schedule-independent only under the consensus receipts

geometry and gravity

causal-poset grammar + 1+3 precursor; exact compatibility controls

any finite strict poset compiles; height = longest parent chain; $\mathbb{R} \oplus \text{rank-3} \rightarrow \text{dim } 4$

auxiliary order $\rightarrow$ cone; exact candidate needs edge speed + two separation checks

9 balances $\rightarrow$ Einstein shape on a separate supplied tensor interface

#l/p + refinement + independent dimension + manifold/topology: conditional

$\rightarrow$ effective 3+1 / smooth GR, conditional

currents and matter

physical-current attachment required

A_5 port response $\rightarrow$ compact current

Standard Model Lie type

matter and QFT, conditional

one source-bound observer world

route identity, attachment, and inhabited-tower receipts are required
